State Corporation Commission

Hello,

My name is Cole Kendall. I am a QA Developer with a year and a half of experience in SDET operations and QA automation. I possess a Bachelor's and Associate's in Computer Science. I find great pleasure in the Software Development life cycle and wish to continue my career in this field. After browsing Indeed.com for opportunities in a position I can provide my expertise in, I ran across your opening for a Quality Assurance Analyst.

As a QA/Automation developer, at globalLogic, it was my duty to ensure the product provided to the customer functioned according to the user stories every sprint. I was assigned to write automated test cases using tools like selenium, postman, and Jmeter.

I take pride in my capacities in the field of software development in general. On my own time, I studied and passed the Security+ and the AWS CCP and intend to continue obtaining certifications in that way to observe personal growth. If called to the task, I could perform all standard tasks relevant to testing your software to make sure it meets the users specifications. Outside of work activities, I take great pleasure in finding software oriented solutions to everyday problems. I have used AWS to host game servers for my friends. I could deploy selenium box for you on an EC2 instance. I have written path finding algorithms to allow my friends artwork spring to life and move like it has a mind of its own. I could write a script that checks for the existence of a file hidden deep in a code base for you and then returns the path to it. I helped a friend's side hustle by flipping mislisted items online by writing a web scraper to check prices daily and then alert them when an item is at a critical discount. I could write an application that checks the availability of different endpoints and alerts you of their downtime.

I am well practiced, well experienced, and well adjusted to join your team. I wish nothing more than to provide you with the highest excellence and quality assurance for you and the end users. I hope to hear from you to discuss how we may move forward.

Sincerely,

Cole Kendall
