VA Workers' Compensation Comm

Greetings Ms. Habel,

I am a software developer with working experience in SDET operations. I have a broad range of skills that I would like to provide for you and your company. After browsing Indeed.com for opportunities in a position I can provide my expertise in, I ran across your opening for an Application Developer.

During my training with Revature, I was taught how to develop applications using the tech stack described in your company's opening. We used Angular for the front end and Java spring boot for the backend. Hibernate was used to interface with a MySQL database. I possess both the Security+ and the AWS CCP certifications and intend to continue obtaining certifications. I studied and passed these as a means to display my broad capacities in the field of computer science.

I want to work for your company. I have real work experience and I will put in real work results. I am passionate about computer science and you will see it in my work and you will see it in your systems.

I am well practiced, well experienced, and well adjusted to join your team. I wish nothing more than to provide you with the highest excellence and quality assurance for you. I hope to hear from you to discuss how we may move forward.

Sincerely,

Cole Kendall
