Amentum

Greetings,

I am a developer with experience programming in Java and Python. I possess a Bachelor's and Associate's in Computer Science. I have prior experience performing quality assurance with systems utilizing micro services. After browsing Indeed.com for opportunities in a position I can provide my expertise in, I ran across your opening for a Software Engineer.

While working at GlobalLogic, I wrote tests against many different services. I contributed to the team's automated test suite that ran against their web application using selenium web-drivers programmed with Java. I used Python when it came to automating mundane tasks like validating the APIs and various micro services. I possess both the Security+ and the AWS CCP certifications and intend to continue obtaining certifications. While they were not related to my duties with GlobalLogic, I studied and passed these as a means to display my broad capacities in the field of computer science.

I am hungry for a challenge. I will be the man you call to solve your problems with passion and completeness. I am already seasoned in the field. I will require very little time to acclimate and contribute as a member of the team and provide your company with results.

I wish nothing more than to provide you with the highest excellence and quality of work. I hope to hear from you to discuss how we may move forward.

Sincerely,

Cole Kendall
