Honeywell

Greetings,

My father was an F-16 fighter pilot and his call sign was “Rainman”. When they brought him to his superiors to give his call sign they said (paraphrased to save some obscenities) “Who else recalls obscure information and is super awkward? Rainman!”. As you can imagine, I inherited a few things from him. When I was in highschool, he bought me an A+ certification study guide and inspired me to get into the field of computer science. Given he worked a lot, we never talked much; however, towards the end of his service, he was assigned to some technology transition involving Datalink. As I got older, I started realizing, in hindsight, when a grown man talks about his work to you, normally, it means they enjoy what they do. I would like to know more about the technology that made him happy, or atleast have something to talk about next time I see him. There are alot of personal reasons why I want to work under your company outside of what I have stated above; however, I should now professionally try and sell myself to you so that you will want to hire me.

As a QA/Automation developer, at globalLogic, I wrote tests against many different services. I used Java and Python to automate my team’s workflow and I was a key member of the onshore team for meeting the goal number of test cases automated each sprint. I was the one who read through old documentation and code to find out how to incorporate it into the success of our objective that sprint. I have obtained both the Security+ and the AWS CCP certifications and intend to continue obtaining certifications. While they were not related to my duties with GlobalLogic, I studied and passed these as a means to display my broad capacities in the field of computer science and if I am assigned to learn anything new while working under Honeywell, I will prove to you that learn fast and apply faster.

I want to work for your company. I have real work experience and I will put in real work results. I will very likely be the only person you will get an application from that is as passionate to understand Datalink communications as I do. You will see it in my work and you will see it in your systems, if you choose to hire me.

I am well practiced, well experienced, and well adjusted to join your team. I wish nothing more than to provide you with the highest excellence and quality assurance for you. I hope to hear from you to discuss how we may move forward.

Sincerely,

Cole Kendall
